

allure

New AviClear Laser Could Clear Severe Acne for Good

What is Aviclear, and how does it work?

AviClear is the first and only FDA-cleared energy device for the treatment of mild to severe acne. The laser is the first of its kind, as it can be used to treat all skin tones, no matter how minor or major a patient's breakouts may be. How? By selectively targeting and suppressing the sebaceous glands, which produce the sebum (the oily substance on the skin) that can cause and intensify breakouts.

THE LASER IS THE FIRST OF ITS KIND, AS IT CAN BE USED TO TREAT **ALL SKIN TONES**, NO MATTER HOW **MINOR OR MAJOR** A PATIENT'S BREAKOUTS MAY BE.
